

RITRANSPARENCY REPORT 2020

La Financière Responsable

About this report

The PRI Reporting Framework is a key step in the journey towards building a common language and industry standard for reporting responsible investment (RI) activities. This RI Transparency Report is one of the key outputs of this Framework. Its primary objective is to enable signatory transparency on RI activities and facilitate dialogue between investors and their clients, beneficiaries and other stakeholders. A copy of this report will be publicly disclosed for all reporting signatories on the PRI website, ensuring accountability of the PRI Initiative and its signatories.

This report is an export of the individual Signatory organisation's response to the PRI during the reporting period specified above. It includes their responses to mandatory indicators, as well as responses to voluntary indicators the signatory has agreed to make public. The information is presented exactly as it was reported. Where an indicator offers a response option that is multiple-choice, all options that were available to the signatory to select are presented in this report. Presenting the information exactly as reported is a result of signatory feedback which suggested the PRI not summarise the information.

PRI disclaimer

This document presents information reported directly by signatories. This information has not been audited by the PRI Secretariat or any other party acting on their behalf. While this information is believed to be reliable, no representations or warranties are made as to the accuracy of the information presented, and no responsibility or liability can be accepted for any error or omission.

Usage restrictions

Public Transparency Reports are the intellectual property of PRI. Under no circumstances, can this report or any of its contents be sold to third parties.

La Financiere Responsable (LFR) is an asset manager, specialized in the selection of european listed stocks, according to its specific method of management : the Integral Value Approach IVA®. La Financiere Responsable manages open-ended and semi-closed funds for institutional investors and intermediated private investors.

This discretionary management method aims at selecting values after a detailed analysis of, successively :

- 1. the business and strategy of the underlying company, (strategy analysis based on Michael E. Porter's works)
- 2 . the implementation of this strategy and the company's real practices with all its stakeholders (extra-financial analysis)
- 3 . the financial profile of the company and its stock valuation on the markets (financial and valuation analysis)

Because of its attention to companies'strategy and business development potential, this method concentrates LFR fund managers towards "growth" stocks. The Integral Value Approach IVA® is a SRI (Socially Responsible Investment) management method, because of the integration of non-financial data, during the stock analysis process, even before its financial review.

If the investment process of La Financiere Responsable is mainly based on the selection of growth stocks, the fund management team also relies on a macroeconomic diagnosis, established upstream by our economist E. Lechypre, and the Chief Economist of MAPFRE, Alberto Matellan to identify global development trends (top down analysis).

Ultimately, the objective of La Financiere Responsable is to obtain in the long run a good financial performance for investors, by investing in companies managed and organized to:

- develop a full, balanced and sustainable growth, allowing all stakeholders (staff, environment, customers, suppliers, civil society and shareholders) to

benefit from the economic growth.

- have a better resilience to the time-to-time shocks of the real economy.
- LFR's investment strategy is intended for the following investors:
- Institutional investors
- $\mbox{\sc Banks}$ and financial companies, for their proprietary accounts or for their clientele.
- HNW individuals through their private managers or IFAs
- Corporates
- Employees saving schemes.

La Financiere Responsable has also benefited each year since 2010 from a research tax credit from the French Ministry of Education and Research. For the last review in november 2018, the SRI label supported by the French public authorities was awarded to all La Financière Responsable's funds. We remind that in 2016 La Financiere Responsable was the first independent asset manager to have its funds awarded this State label. In December 2017, La Financière Responsable won the French state-backed award – the CSR Challenge Trophy for the Responsible Finance (Trophée RSE pour la Finance Responsable) – for its socially responsible investment approach. In 2019, its 3 directly managed funds still benefited the SRI Label.

selection, appointment and monitoring processes.

La Financière Responsable is a management company specializing in the selection of shares of listed European companies. To do this, it has developed an original management method: the Integral Value Approach IVA®. Thus, it manages open funds or management mandates for institutional investors and private investors

This discretionary management method aims to select issuers after a detailed analysis which follows the following steps:

- 1. Analysis of the business and strategy of the company considered according to the work of Michael E. Porter, Harvard University.
- 2. The implementation of this strategy and the actual practices of the company vis-à-vis all of its stakeholders. This represents extra-financial analysis.
- 3. The financial profile of the company and its market valuation. This is the company's financial and market analysis.

Responsible Financial is particularly attentive to the strategy of companies as well as to the development potential of their business. Thus, it is placed on growth companies

The Integral Value Approach IVA® is a management method that is part of a Socially Responsible Investment approach by integrating extra-financial data into the whole analysis before even the financial analysis.

If La Financière Responsable's investment process is mainly focused on the selection of growth companies, the management team relies on macroeconomic work carried out by two economists: Alberto Matellan, chief economist at Mapfre and Emmanuel Lechypre economist-columnist on BFM TV. Both identify a top-down approach for future global trends.

Finally, La Financière Responsable's objective is to obtain good long-term financial performance for its investors by choosing companies that:

- develop balanced and sustainable growth allowing all of its stakeholders to benefit from it: employee, environment, consumers, civil society, shareholders, suppliers, etc.
- have better resilience in the face of different economic hazards.

Companies are systematically excluded if they have:

- had direct and indirect impacts on the environment that were not compatible with the challenges of sustainable development.
- direct and indirect links with activities related to cluster munitions and anti-personnel mines. This is an obligation for all French management companies.
- been involved in controversies related to non-compliance with Human Rights and related international conventions.
- practiced layoffs without accompaniment beyond legal requirements in the last three years.
- refused to communicate financial and / or extra-financial data.

To this management method is added the maintenance of an internal database "the Ecosocial Footprint" which has followed for more than 10 years the extra-financial data of more than 206 companies that we interview each year on 145 indicators. It allows us to follow the companies in our portfolios as well as many others who are not necessarily eligible. This database is updated every year thanks to the work of analysts who solicit companies for more information

The exclusion rate from our LFR Euro Développement Durable and LFR Actions Solidaires funds is almost 25%.

For our LFR Responsible Inclusion fund, these exclusions are added to this:

- refusal to communicate data related to disability

This LFR Inclusion Responsable fund is also linked to a proprietary database (Inclusion Indicators Database 2ID) which is made up of extra-financial data obtained by means of an internally developed question that we then transmit to companies. This questionnaire focuses on 7 themes: quantitative data, formalization of the disability policy, adaptation of premises, recruitment and integration, retention of people with disabilities, specific initiatives or support for inclusion programs, operations reserved for the protected sector. These 7 pillars form the questionnaire of almost 70 questions and allow La Financière Responsable to maintain a unique and qualitative database on the quality of companies with regard to the inclusion of people with disabilities. For us, the most inclusive companies are those that know how to enrich themselves from each other's differences, to be more innovative and better able to meet the challenges of tomorrow. This fund has an investment universe of 259 stocks and represents all of the companies interviewed. In terms of the quality of the responses, the final exclusion rate from the fund is almost 72% to select 26 issuers.

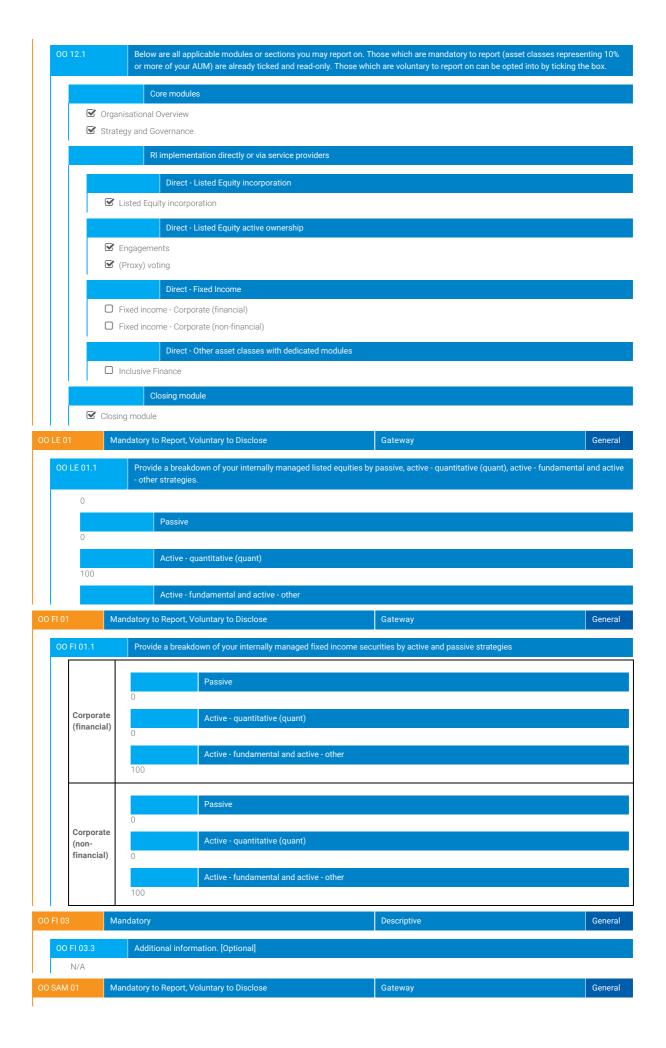

All of our portfolios are subject to a long-term investment horizon. By promoting investment in companies that meet the various challenges outlined above, we consider that the transition to a more sustainable and inclusive economy is at the heart of our management process

For your externally managed pooled funds, describe any mechanisms in place to set expectations as part of the appointment or

This question only concerns our diversified fund Mapfre Capital Responsible, for which we are not legally the management company, Mapfre is the

On the bond pocket, we only ensure the ESG eligibility of corporate bonds (declared under external management) as a fund advisor, and do not intervene in the management of the fund. Eligible bonds follow the same analysis process as usual. On our behalf, for our other funds, we carry out dialogue activities if necessary. Regarding Mapfre Capital Responsible, this theme is the responsibility of Mapfre. Nevertheless, we manage the equity pocket of this fund according to our usual process.

☐ We do not publicly disclose any investment policy components

At La Financiere Responsable (LFR), our conviction is that the mid-term financial performance is based on the growth of the real economy: that is to say on

Business growth is in the quality of management, which must optimize production factors, both financial and non-financial, in order to consistently implement the company's strategy. Thus, the quality of a company is not solely a matter of financial results (the result), but there is a need for assessing the quality of its strategy and consistency of its implementation, through the clues revealed by extra-financial indicator analysis.

The investment philosophy of LFR is therefore based on the assessment of the full quality - not only financial - of the underlying companies, guaranteeing a sustainable growth potential. The LFR fund managers/analysts are primarily "business experts" and conviction fund managers.

This discretionary management method aims at selecting stocks after a detailed analysis following the steps below:

- 1. the business and strategy of the underlying company (strategic analysis based on Michael E. Porter works)
- 2 . the implementation of this strategy and the company's practices toward all its stakeholders (extra-financial analysis)
- 3 . the financial profile of the company and its stock valuation on the markets (financial and valuation analysis)

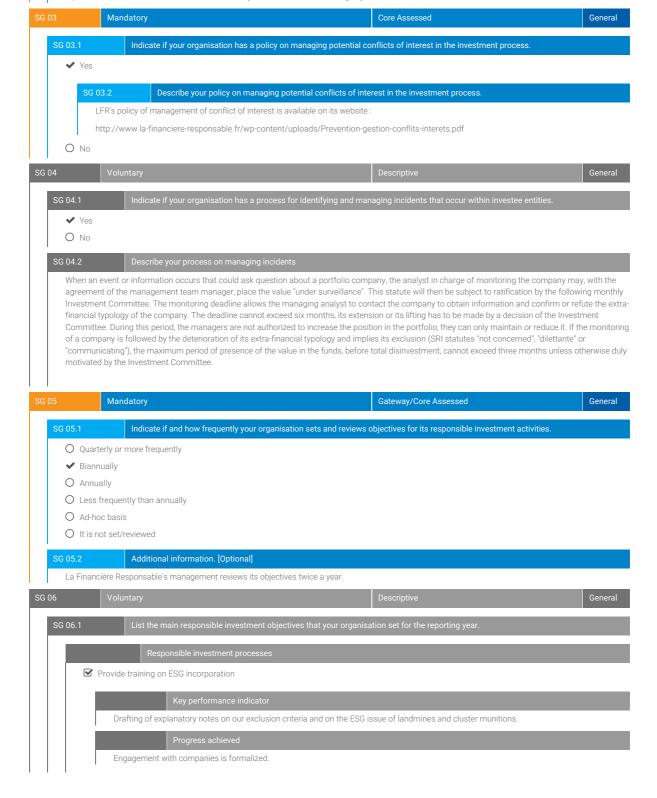

Due to its attention to companies'strategy and business development potential, this method concentrates the stock selection of LFR fund managers towards "growth" securities.

The Integral Value Approach IVA® is a SRI (Socially Responsible Investment) management method, because of the integration of non-financial data, during the stock selection process, even before its financial review.

If the investment process of La Financiere Responsable is mainly based on the selection of growth stocks, the fund management team also relies on a macroeconomic diagnosis, established upstream by our economist E. Lechypre and the chief economist of MAPFRE, Alberto Matellan, to identify global growth trends. (top down analysis)

LFR's investment strategy is mainly intended for the following customers: Institutional investors, banks and financial companies (for their own accounts or for their customers), HNW individuals through their private managers or IFAs, companies, employees savings schemes

La Financiere Responsable's method is distinguishes itself by a large extra-financial data collection, conducted by LFR's fund managers, directly from companies, and by an intensive research work. Thanks to its detailed knowledge, La Financiere Responsable is able to account for extra-financial impacts and concrete practices of companies selected in the portfolio. This research is summarized in the "Ecosocial Footprint" (Empreinte Ecosociale®) annual report and available to clients. LFR's accountabilitry on investments is a strong key differentiator.

stud con	information and our ESG analysis lead to the filling of our internal database (the Ecosocial Footprint) and to a proprietary SRI typology (leader, good lent, and promising: in which we can invest, and dilettante, communicating and not concerned for companies in which we cannot invest. We follow the aposition of the portfolio according to the typology. This is also sent to customers regularly in our monthly report. We first favor companies with best stices, then those with good practices.
LEI 10.	Describe the methods you have used to adjust the income forecast/valuation tool.
con sale	rder to calculate a target price for a company security, we use a method based on a DCF model (well adapted for growth companies) and a valuation parables sample of companies prenseting the same expertise or strategy. The hypothesis of the DCF are based on growth forecasts of the turnover, is and margin integrating opportunies of sustainable products or services or extra-costs in case of specific ESG risks or constraints (energy efficiency ng programs, investments or costs)
sha	also use the inverse DCF for a dynamic valuation of shares: What rates of growth and profitability must the company achieve in order for the expected reprice to be reached? What actions must management take in order to attain these objectives and the increase in share price we expect? Can it ertake them?
